

Structure [execution order]

root/

```
common/
  layouts/
    default.cfm [11]
  subsystem/
    controllers/
      section.cfm
        init(fw) [3] *
        before(rc) [4]
        item(rc) [5]
        after(rc) [6]
    layouts/
      section/
        item.cfm [8] section.cfm [9]
        default.cfm [10]
```

views/ **section/**

item.cfm [7]

Application.cfc [1] extends the framework.cfc

setupApplication(), setupSession(), setupRequest(), setupSubsystem()

index.cfm

framework/**ziggy.cfc** [2]

Ziggy MVC

MODEL · VIEW · CONTROLLER

action = subsystem:section.item

a lightweight, convention over configuration,
MVC application framework for ColdFusion /
CFML

only runs when **section.cfm** is instantiated

Controller

commonly used functions

```
variables.fw.populate()
variables.fw.redirect()
variables.fw.renderData()
variables.fw.setView()
variables.fw.customizeViewOrLayoutPath()
```

View/Layout

commonly used functions

```
view()
buildURL()
layout() getBeanFactory()
```

/variables

```
body
rc[]
local[]
framework[]
request.layout
```

Configuration

```
variables.framework = {
  action = 'action',
  // base = omitted so that the framework calculates a sensible default
  usingSubsystems = false,
  defaultSubsystem = 'home',
  defaultSection = 'main',
  defaultItem = 'default',
  subsystemDelimiter = ':',
  siteWideLayoutSubsystem = 'common',
  home = 'main.default', // defaultSection & '.' & defaultItem
  // or: defaultSection & subsystemDelimiter & defaultSection & '.' & defaultItem error
  // = 'main.error', // defaultSection & '.error'
  // or: defaultSection & subsystemDelimiter & defaultSection & '.error'
  reload = 'reload',
  password = 'true',
  reloadApplicationOnEveryRequest = false,
  preserveKeyURLKey = 'fw1pk',
  maxNumContextsPreserved = 10,
  baseUrl = 'useCgiScriptName',
  generateSES = false,
  SESomitIndex = false,
  applicationKey = 'org.corfield.framework',
  unhandledExtensions = 'cfc',
  unhandledPaths = '/flex2gateway',

  cacheFileExists =
false };
```
